

LTM offer the Lodestar Plus, an enhanced motor with modifications:

- Mechanical Chain Stop – This prevents the chain from detaching itself from the hoist in case of limit switch problems (in addition to standard electrical limit switches)
- Anti-Phase Units – Prevents hoist operation if the power is incorrectly phased
- Latchlok Hook on Chain End – Self locking, non-releasing
- Strain Relief on End Cover – For the securing of cables
- ARS Bag fitted to allow safe use of hoist in climbing and upright positions
- Same size and shape as standard Lodestars
- Latchlok Hook is easily installed on CM Lodestar hoists in service

**This isn't just any motor – this is an LTM Plus motor
Only available from LTM – “The Lodestar People”**
